

URGENT MAJOR PUBLIC MEETING

Restore Our Water International (ROWI) is holding a major public meeting to update the community about what can be done about our unprecedented low water levels in Lakes Michigan/Huron/Georgian Bay. This is having huge negative impacts environmentally, ecologically, socially and economically.

Restore Our Water International is a growing alliance of Canadian and American Activist groups concerned with the above. They represent over 15,000 shoreline owners and business interests.

The special keynote speaker at this meeting is ROGER GAUTHIER, Chair of ROWI, and a recently retired Senior Hydrologist who spent 30 years with the U.S. Army Corps of Engineers (USACE).

DR. PAT-CHOW FRASER, Professor at McMaster University and ecologist will speak on the ecological impact of 14 years of low water levels.

MARY MUTER, well known as Chair, Great Lakes Section, Sierra Club, and Vice Chair of ROWI will also be present at this critical meeting.

Please plan on attending this meeting where the solution to this low water crisis will be presented and support the restoration of our Lakes. Your ongoing support is critical!
